EXOTIC FISH
From Amazon River

Frigopesca

Company.

Frigopesca is an Amazonian company, located on the banks of the Solimões River, Town of Manacapuru 62 miles from Manaus, capital of Amazonas. Dedicated to the processing of freshwater fish from the Amazon.

Estabilished in 1996, has demonstrated consistent growth in the fish industry.

As the scale of production increases, will face emerging biological,economic and social challenges that may influence the ability to maintain ethically sound, produtive and environmentally friendly production of fish in the Amazon region.

With a wide commercial structure, Frigopesca includes: fish processing room, freezing tunnels, cold rooms, packaging room, ice factories and administrative sectors. All areas of the company were built abide the technical standards and laws required by the Department of Agriculture.

Our current fish storage capacity is 4500 tons. In addition, it employs more than 800 employees, distributed in Manacapuru and throughout the small Towns.

In regards of our final product, it supplies fish for all Brazil and currently to Overseas.

Where the company scope, we own a Farm named "Fazenda 25 de Dezembro", we take part of all phases from our fishery business,the initial stage (fingerlings) to fully-grown adults.

Our Farm occupies a vast area, it is equipped with numerous fish ponds, and complete physical and personnel structure for full control of fish development. Among them, we mention as the main Tambaqui and Pirarucu, which are noble and exotic species, and are most appreciated both in the region, and in other States of Brazil.

Frigopesca is also equipped with numerous boats, capable of meeting the transport needs of both personnel, and fish in the region. One of them is the ferry "Iolanda Marques", a state-of-the-art vessel with capacity for more than 200 people and with a chamber for 50 tons of fish.

Current Mission

Expand beyond the borders of the Amazon, with excellence in the products we offer, working ethically, responsibly and transparently, always preserving the environment, showing the varieties of fish we own, providing the world with a healthy food with quality and responsibility.

Currently our company is in a process of upgrade our system, where new equipment is being installed, and with necessary and adequate preparation of our employees,for new tasks and certain technical and administrative procedures.

We offer paid training to all our professionals, through courses, seminars and lectures.

TAMBAQUI

(Colossoma Macropomum).

The Tambaqui is a fish of scales, with rhomboidal body, high, flattened and serrated in the chest. Features a powerful dentition, adapted to break the hard nuts that are part of your diet. In its gills, long and thin spines can be observed. It has a short adipose fin with rays at the end, molariform teeth and long and numerous gill rakers. Its color is brown, in the upper half, and black in the lower half of the body, but it may vary to be lighter or darker depending on the color of the water. It has the meat much appreciated. It can reach up to 1.1m (3.6 Ft) in total length and 44Kgs (97 lbs) in weight.But a more typical size is 0.7m (2.3ft) .

QUALITY

Tambaqui is ideal for those who want to lose weight due to the large amount of protein. The species has natural fat responsible for hormonal formation. The consumption of Tambaqui also results in improved transport of nutrients into the cell.

PIRARUCU

(Arapaima Gigas)

Pirarucu fish is the largest freshwater scale fish in Brazil and one of the largest in the world. It has cylindrical shaped body, flat head and protruding jaws. His eyes are yellowish and have a bluish pupil, somewhat protruding. Its coloration is greenish-brown, dark reddish on the flanks, the intensity being variable according to the size of the individual and the type of water in which he lives. It is a species that has accessory breathing, using the dissolved oxygen in the water, but mainly of the air and, therefore, has to rise frequently to the water surface. Can live for more than 18 years. Due to its excellent meat, it is considered "Brazilian Cod". It can reach maximum length of 3m (10 ft) and 220 kgs (485 lbs) of weight.

QUALITY

Pirarucu is a source of omega 3 and 6, a natural antioxidant. The antioxidant protects veins from premature aging, in addition to reducing cancer cells. Omega 3 lowers cholesterol and increases good cholesterol (HDL).

AROWANA

(Osteoglossum Bicirhossum)

The Arowana is a fish covered by scales, with white color, but the scales become reddish at the time of the spawning. The back is dark green and the center of the flank scales, silver or gold. It has a very elongated and compressed body. It has a short and well evident lateral line. His mouth is huge, with barbels on the tip of his chin, and bone and rough tongue, like that of the Pirarucu. It can reach up 0.9 m (3.0ft) in total length and weight up to 5 Kgs (11 lbs).

Arowana is a white meat fish, tasty, nutritious and does very well for health. Ideal for those who want a balanced diet, rich in omega 3, which reduces blood viscosity, lowering triglyceride rates and increasing good cholesterol. It can help control blood pressure, diabetes and degenerative diseases. It has a large amounts of protein, minerals such as magnesium, that helps maintain a good mood.
